EPOXY RESIN FLOORING SYSTEMS

Available in a wide range of finishes, our industrial grade epoxy resin systems are modified to suit the requirements of our clients. Choose from a variety of mono colour options, decorative flakes or unique metallic designs. The choices within resin flooring are endless.

The finished surface is comfortable under foot, extremely durable and easily cleanable. The durability of epoxy resins is truly outstanding. Able to withstand the rigorous demands of industrial wear and tear, resistant to a range of highly corrosive chemicals and completely impervious to water ingress.

INDUSTRIAL & COMMERCIAL RESIN FLOORS

Concrete serves a purpose as an integral part of most structures. We provide general purpose grey concrete as well as unique decorative concrete. Furthermore, we are able to install house pads, garages, sheds, pedestrian walkways, driveways, pool surrounds and large scale commercial pours.

While offering an almost unlimited range of texture, colour and design options, no two concrete surfaces are the same. Therefore, each concrete project results in a completely individual addition to any property.

DECORATIVE FLAKE FLOORING SYSTEMS

Decorative resin floors are fast becoming popular amongst architects and designers alike. Due to a few of its fantastic features:

- Impervious Coating.
- Multiple Colour & Design Options.
- Seamless Flooring.
- Ease of Maintenance.
- Long Lasting.
- Fast Application.

ProjectCONCRETE are well versed in producing stunning decorative resin based floors.

CEMENT OVERLAY SYSTEMS

The new trend in architecturally designed builds, cementitious overlay systems or veneers provide a stylish and contemporary flooring solution. Applied as a thin layer over existing, structurally sound substrates, these polymer modified cement based compounds are able to withstand med/heavy commercial traffic.

These are stunning hand crafted surfaces that can be fully personalised. We are able to provide a variety of base colours, as well as achieving either an aggregate or non-aggregate finish. This ability to personalise the floor, along with the rapid setting ability of the material, allows for fast turn around of stunning decorative cement based floors.

OUR PREFERRED PRODUCTS

Having been in the game for over 15 years, we've used many of the cement and resin based products available. We're lucky enough to have learnt from our many years of experience and we are proud to stand behind the few, high quality suppliers that we partner with to create our floors.
